

Technology Transfer:

## How to drive on the bumpy road from science to market and the other way round?

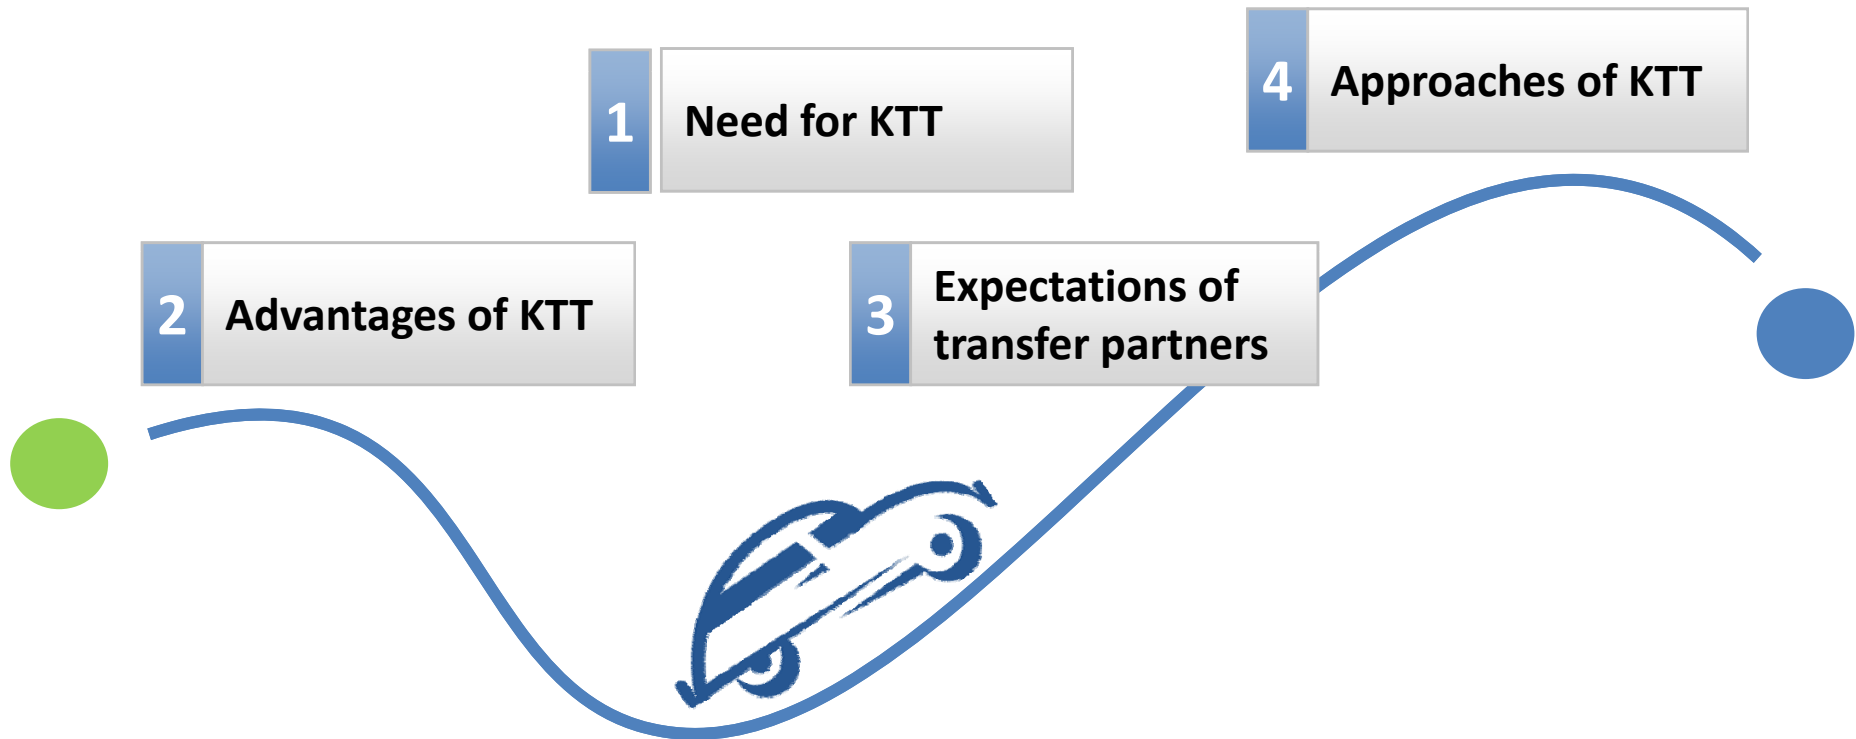

Dana Mietzner

Presentation at the German – Latin America Conference on Knowledge and Technology Transfer and Biotechnology and Life Science (DeLaTec)

Potsdam, 01.- 04.Juni 2014

# How to drive on the bumpy road from science to market and the other way round?

Why do we need  
knowledge- and  
technology transfer?

- Knowledge, research and development are the key fundamentals for innovation
- Science as a driving force for innovation in the business world
- Increasing importance of high-tech industries and knowledge intensive services
- Companies do often focus on core competencies in R&D, current and mid-term developments as well as current customers needs
- Lack of resources (financial resources, specialized employees) in companies, especially SMEs for permanent R&D activities
- Basic research as a key issue mainly for public research institutions

# Advantages of Knowledge- and Technology Transfer

## Advantages for Universities

- Accesability to financial sources
- Accesability to practical issues and relevant fields of applications
- Identification of requirements of the employment market and implementation of corresponding curriculars
- Improvement of employability of graduates and researchers
- Implementation of reference projects and sharpening the University profile

# Advantages of Knowledge- and Technology Transfer

## Advantages for Companies

- Improvement of competitive advantages through the accumulation of knowledge and accelerated innovation processes
- Relationships with Universities improve the possibilities in the recruitment of high-skilled personal
- Improved accessibility to public research programs/funds
- Reduction of risks in R&D projects
- Establishment of long-term oriented strategic networks

# Expectation of the Cooperation Partners

Needs	Expectations of Companies	Expectations of Universities
<b>Economic interest</b>	<b>Success in terms of innovation</b> <ul style="list-style-type: none"> <li>▪ Profit</li> <li>▪ Risk and time</li> </ul>	<b>Resources</b> <ul style="list-style-type: none"> <li>▪ Finance</li> <li>▪ Research staff</li> </ul>
<b>Know-how</b>	<b>Competencies in terms of technology</b> <ul style="list-style-type: none"> <li>▪ Access to expert knowledge</li> <li>▪ Use of laboratories</li> </ul>	<b>Practical experience</b> <ul style="list-style-type: none"> <li>▪ Implementation of results</li> <li>▪ Insights for education purpose</li> </ul>
<b>Human Capital</b>	<b>Contacts</b> <ul style="list-style-type: none"> <li>▪ Extension of the knowledge base</li> <li>▪ Recruitment</li> </ul>	<b>Contacts</b> <ul style="list-style-type: none"> <li>▪ Work possibilities</li> <li>▪ Practical experience</li> </ul>
<b>Communication</b>	<b>Information</b> <ul style="list-style-type: none"> <li>▪ Consultancy</li> <li>▪ Exchange of ideas</li> </ul>	<b>Information</b> <ul style="list-style-type: none"> <li>▪ Ideas</li> <li>▪ Conferences, fairs</li> </ul>

## What is needed...?

Transfer and Absorptive Capacities.

- Need for **active moderation of the knowledge and technology transfer process**
- Need for **transfer capacity** in order to **trigger and to manage** the transfer of knowledge and technology into market applications

- Need for **absorptive capacities** in the knowledge and technology transfer process

## New Methods in Technology Transfer

Methods in KTT	Description
<b>Open Innovation Platforms</b>	<ul style="list-style-type: none"> <li>Companies bring in specific problems and researchers should be motivated to screen problems and to develop solutions</li> </ul>
<b>Problem conferences</b>	<ul style="list-style-type: none"> <li>Companies present practical problems and researcher develop solutions in a conference setting format</li> </ul>
<b>Match panel – improvement of networking during conferences</b>	<ul style="list-style-type: none"> <li>Partners will be connected based on background information (delivered before the conference) in order to find partners suitable to the area of interest by using different contact channels</li> </ul>
<b>Opportunity recognition workshops</b>	<ul style="list-style-type: none"> <li>Technical solutions and market needs are discussed and matched in order to trigger new product ideas</li> </ul>
<b>Scenario analysis</b>	<ul style="list-style-type: none"> <li>Visualization of long-term development for strategic decision making processes and the identification of future needs</li> </ul>
...	<ul style="list-style-type: none"> <li>...</li> </ul>

see Piller, 2013, 16, et seqq.

## Different Approaches in Knowledge and Technology Transfer

How to do  
Knowledge and  
Technology Transfer?

- Contract research
- Consulting
- Licensing
- **Spin-offs**
- **Projects in joint cooperation**
- **Joint use of laboratories**
- Student research projects, thesis, ...
- Internships

# Entrepreneurial Approach: Spin-offs through Technology Scouting

Technology Scouting in a nutshell.

Technology Scouting in  
Universities and other  
research institutions

## Aims

- (1) Identification of promising technologies/technological developments and **encouragements of spin-offs**
- (2) Assessment of technological developments in terms of its **readiness for market applications**
- (3) Systematic identification of **complementary technologies**, possible **fields of application**, **partners** in science, companies as well as potential customers, and markets

## Technology Scouting

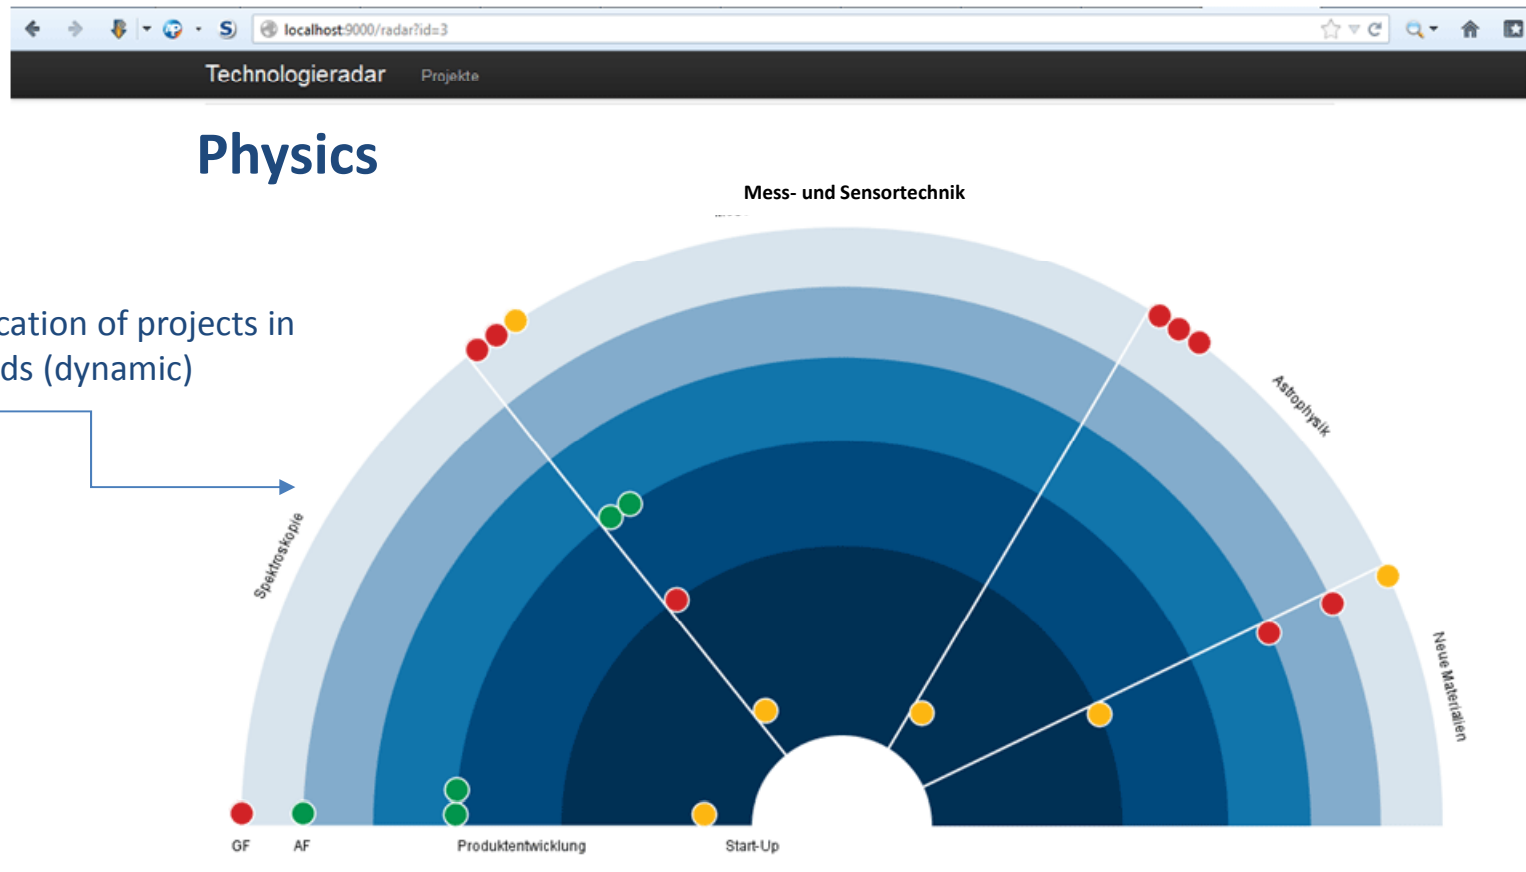

### Internal perspective

- (1) Workshops and direct contact with researchers in University institutes in order to identify promising technological developments
- (2) Constantly monitoring and re-evaluation of research projects (e.g., supported by technology canvas, technology radars)
- (3) Assessment of spin-off options and alternative transfer options (e.g., licensing)

# Entrepreneurial Approach: Spin-offs through Technology Scouting

Technology Radar as a visual tool (webbased application).

Classification of projects in sub fields (dynamic)

- more than 12 months ago
  - between 7 - 12 months
  - less than 6 months
- } last contact

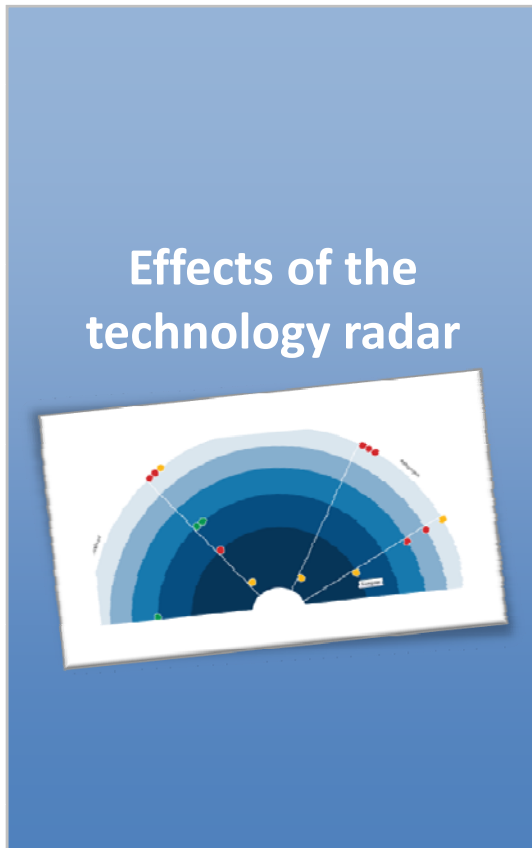

# Different Approaches: Spin-offs through Technology Scouting

## Database (Example)

Areas	Indicators	Sources
<b>Project key data</b>	<ul style="list-style-type: none"> <li>▪ Responsible Scout</li> <li>▪ Name of the project</li> <li>▪ Number of the project</li> <li>▪ Acronym</li> <li>▪ Funds by...</li> <li>▪ Last contact</li> <li>▪ Contact person</li> <li>▪ Institution</li> <li>▪ Research fields of the institute/research group</li> </ul>	<ul style="list-style-type: none"> <li>▪ Technology canvas</li> <li>▪ Interviews</li> <li>▪ Desk research</li> </ul>
<b>Fields- and sub fields</b>	<ul style="list-style-type: none"> <li>▪ Scientific discipline and categories (sub-fields)</li> <li>▪ (Projects can be allocated in several sub-fields)</li> </ul>	<ul style="list-style-type: none"> <li>▪ Technology canvas</li> <li>▪ Interviews</li> <li>▪ Desk research</li> </ul>
<b>Project description</b>	<ul style="list-style-type: none"> <li>▪ Short description of the project</li> <li>▪ tags</li> </ul>	<ul style="list-style-type: none"> <li>▪ Technology canvas</li> <li>▪ Website</li> </ul>
<b>Type of project</b>	<ul style="list-style-type: none"> <li>▪ Basic research</li> <li>▪ Applied research</li> <li>▪ Product development (0 - 3,5 years)</li> </ul>	<ul style="list-style-type: none"> <li>▪ Technology canvas</li> <li>▪ Interviews</li> </ul>
<b>Comments</b>	<ul style="list-style-type: none"> <li>▪ Free text</li> </ul>	
<b>Upload of documents</b>	<ul style="list-style-type: none"> <li>▪ E.g., technology canvas</li> </ul>	
<b>Links</b>	<ul style="list-style-type: none"> <li>▪ Institute, chair...</li> </ul>	
...	<ul style="list-style-type: none"> <li>▪ ...</li> </ul>	...

## Entrepreneurial Approach: Spin-offs through Technology Scouting

Technology Radar as a visual tool.

- Overview of projects in several research fields
- Overview about the type of projects (basic research or ready for application?)
- Overview regarding the status of interaction between the researcher and the KTT unit (scout)
- Estimation of the spin-off potential in selected fields of research
- Comparison between different fields of research/institutions with regard to the spin-off potential

# Different Approaches: Spin-offs through Technology Scouting

To bridge the Gap between Science and Market.

## Technology Scouting

External perspective

- (1) Environmental scanning for the identification of potential **fields of application**
- (2) Specific search for **complementary technologies, partners and customers** outside the University...
- (3) Assessment, storage and processing of information

# Different Approaches in Knowledge and Technology Transfer

How to do  
Knowledge and  
Technology Transfer?

- Contract research
- Consulting
- Licensing
- Spin-offs
- **Projects in joint cooperation**
- **Joint use of laboratories**
- Student research projects, thesis, ...
- Internships

see also Piller, 2013, 7 et seqq.

# Collaborative Projects and the Use of Laboratories

## One Example: The ViNN:Lab Initiative

Have a look on our website and let's stay in touch via facebook.

<https://www.facebook.com/ViNNLab>  
<http://www.th-wildau.de/creativelab>

# Collaborative Projects and the Use of Laboratories

# Collaborative Projects and the Use of Laboratories

[www.th-wildau.de/creativelab](http://www.th-wildau.de/creativelab)

- Implementation of summer schools in cooperation with ViNN:Lab
- Development of concepts for the “Future of Retail” (new concepts for customer interaction) in cooperation with one of the biggest retail companies in Europe, students from different disciplines, customers, professors, designers...
- Development of concepts, taking into consideration new technological developments (e.g., RFID, locations-based services, indoor-navigation...)

## Rapid Prototyping: Use of Laboratories

### New product development:

#### application: e.g., logistics

Optical measurement system that measures the distance and the dimensions of objects within parts of a second

<http://www.ixellence.com/index.php/de/produkte/ix3d>

- With physical fast built prototypes it was possible to visualize a new hardware product much better than with sketches or on the computer
- With help of the prototype it was possible to **use the product**, to **explore the product**, to **experiment** with the product, to **investigate limitations**, to find solutions
- Due to the 3-D printing technologies prototyping is much faster and cheaper than with conventional methods
- Rapid prototyping allows the production of a second or third prototype for reasonable costs, helps to reduce the time-to-market, improves communication in the development process, and helps to reduce risks and flops

## Key Essentials

### Open roads and green light.

- Transfer partners need to be open and transparent on what they have to offer and in what they are interested in.
- Show your areas of competence.

### No need to arrive in one day.

- Start with smaller collaborative projects or student projects as a starting point for a long lasting relationship.

### Take the fast lane.

- Entrepreneurial culture within the University
- Innovation culture in companies
- Entrepreneurship Education

## Contact

Thank you  
very much!
